-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

All previous rejections are hereby withdrawn.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 and 11-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Figuly (US 5136014).

Patentees in Examples 2-5 in column 8 disclose applicants process for producing coatings and inks (column 6, lines 20-30). With regard to those claims reciting reaction with polyfunctional compound, the amino alcohol of Examples 2-5 itself can be viewed as polyfunctional and can also be said to be a modifying agent in that the compound reacts with any intermediate hyperbranched compound produced.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Figuly, cited above.

Patentees do not disclose that the catalyst to be used in their esterification process is an enzyme although applicants admit at page 7, lines 25 et seq that enzymes catalyzing esterification were known at the time of the invention. Therefore it would have been obvious to a practitioner having an ordinary skill in the art at the time of the invention to use enzymes for catalysis in the place of the esterification catalysts of Figuly in order to avoid use of the catalysts of Figuly (which include tin compounds as are known to be toxic) to decrease hazard due to use of toxic materials and since enzymes are noted for their selectivity absent any showing of surprising or unexpected results.

Applicants are correct that the interview referred to in their remarks was held on 10-7-08. Applicants are requested to resubmit a copy of the interview summary.

Any inquiry concerning this communication should be directed to Jeffrey C. Mullis at telephone number 571 272 1075.
